INDEX OF AUTHORS[1]

Adelberg, Edward A., 321
Ahearn, Donald G., 369
Ajl, Sam, 341
Aldridge, Clifton, 756
Alford, John A., 591
Allen, Mary Belle, 459
Allman, David, 394
Attenbern, Robert A., 510
Anderson, R. E., 566
Andreoni, G., 379
Aronson, Moshe, 734

Baer, B., 758
Bagatell, Fillmore K., 81
Balducci, D., 379
Bánhidi, Z. G., 181
Barkulis, S. S., 33
Batt, Richard D., 9
Beck, Jay V., 502, 661
Beckman, Hans, 638
Bentley, Ronald, 346
Benziman, Moshe, 474
Berman, David T., 807
Berman, R. J., 480
Berman, Sanford, 747
Bertani, G., 387
Bichowsky-Slomnicki, Leah, 734
Biegeleisen, Joseph Z., Jr., 155
Bilanow, Helen, 305
Bisset, K. A., 612
Blackwood, A. C., 411
Blakley, E. R., 411
Blobel, Hans, 807
Bonventre, Peter F., 18, 24
Borzani, Walter, 461
Bose, S. K., 564
Braun, Werner, 246
Brown, William, 142
Brownlow, W. J., 299
Burns, Sarah N., 321

Campbell, J. J. R., 875
Campbell, William E., Jr., 869
Canale-Parola, E., 857, 869
Canby, Charles M., 657
Cardella, Matteo A., 372
Carey, Lee Ernest, 310
Carter, Charles H., 753
Casman, Ezra P., 849
Castelli, L., 379
Catlin, B. Wesley, 579
Chapman, George B., 132
Chesbro, William R., 682
Clark, J. B., 756
Cleverdon, Robert C., 615
Cole, Gerald, 747
Colón, Julio I., 741
Conti, S. F., 331, 417
Curran, Harold R., 361

Dain, Joel A., 239
Dawson, E. Yale, 459
DeArmon, Ira A., Jr., 594
Deibel, R. H., 175, 356
Demain, Arnold L., 783
DeMoss, R. D., 729
Doudney, C. O., 122
Dougherty, Robert M., 899
Duff, James T., 372

Eagon, R. G., 90
Eaton, Monroe D., 95
Edwards, George A., 267
Edwards, Patricia A., 81
Eisler, Daniel, 435
Ells, Audrey F., 875
Eltz, R. W., 763
Englesberg, Ellis, 58
Evans, Fred R., 361
Evans, James B., 113, 356, 682
Evans, N. R., 729

Fell, Jack W., 369
Fellman, J. H., 800
Fernelius, Albert L., 594, 755
Firestone, Bernice Y., 674
Firshein, William, 246
Fogh, Jørgen, 267
Foley, J. M., 480
Foster, J. W., 650
Frazier, W. C., 572
Frisch, David M., 69[illegible]
Fulton, MacDonald, 457

Gary, N. D., 566
Geltzer, Arthur, 306
Gest, Howard, 215
Gilmour, C. M., 691
Gochenour, Raymond B., 747
Gollakota, Krishnamurty G., 1
Goode, Granville, 142
Gori, G. B., 379
Gottfried, Carl, 372
Gray, Clarke T., 95
Greenfield, Seymour, 691
Gregory, Jack, 666
Grula, E. A., 760
Gunsalus, I. C., 474

Hahon, Nicholas, 310
Halvorson, H. Orin, 1
Hampp, E. G., 716
Hardman, John K., 544, 549
Hasenclever, H. F., 677
Hayashi, Osamu, 145
Hayashi, J. A., 33
Hentges, David J., 457
Higuchi, Kiyoshi, 539
Hitchings, George H., 306, 524
Hodson, Phillip H., 661
Holmgren, Nelda B., 869
Howard, Dexter H., 442
Howes, Edward L., 191

Iyer, V., 309

Jacobs, N. J., 532
Jakoby, William B., 145
Juenker, Arnold P., 305

Kaback, Ronald, 313
Kaufman, Leo, 119, 292
Kawata, Tomio, 459
Kempe, C. Henry, 616
Kempe, Lloyd L., 18, 24
Klein, Frederick, 594
Klein, Harold P., 691
Klingman, Norman, 313
Kohn, A., 697
Koser, Stewart A., 674
Krasil'nikov, N. A., 65, 75
Kuehn, Harold H., 150
Kunkee, Ralph E., 43, 51, 55

Lamanna, Carl, 406, 435
Landman, Otto E., 510
Langridge, Robert, 777
Laudelout, H., 39
Levine, H. B., 305
Lincoln, Ralph E., 594
Loebeck, Maude E., 384
Lones, George W., 308
Long, Sterling K., 625, 629
Lowenthal, Joseph P., 747

McBee, R. H., 311
McCloskey, Richard V., 899
Maas, Werner K., 794
MacLennan, A. P., 217
Maisel, John, 616
Majumdar, S. K., 564
Mancini, G., 379
Manclark, C. R., 752
Mandels, Mary, 815
Mandl, Ines, 191

INDEX TO DATE OF ISSUE

Month	Date of Issue	Pages
January	2/1 /60	1–156
February	2/29/60	157–312
March	3/25/60	313–460
April	4/27/60	461–618
May	5/27/60	619–762
June	6/29/60	763–921

INDEX OF SUBJECTS[1]

Acetate, assimilation of, by *Nocardia corallina*, 9
—, metabolism of, by *Micrococcus sodonensis*, 113
Acetic acid, production of, by *Leuconostoc mesenteroides*, 411
Acetokinase in *Lactobacillus brevis*, 763
Achromobacters, effect of temperature on physiology of, 591
Acrolein, formation of, from hydroxypropionic acid, by a lactobacillus, 261
Actinomyces aurantiacus, classification of, 65
— *candidus*, classification of, 65
—, *coelicolor*, classification of, 65
— *fluorescens*, classification of, 65
— *globisporus*, classification of, 65, 75
— *levoris*, classification of, 65
— *raffinosus*, classification of, 65
— *ruber*, classification of, 65
— *streptomycini*, classification of, 65
— *toxicus*, classification of, 65
— *violaceus*, classification of, 65
— *vulgaris*, classification of, 65
Actinomycetes, taxonomy of, 65, 75
Activation of botulinum toxin, 24
Adenine-B_{12} coenzyme, synthesis of, by *Clostridium sticklandii*, 904
Adenine requirements of *Pasteurella tularensis*, 566
Adenosine, monophosphate, degradation of, by *Haemophilus influenzae* and *Haemophilus aegypticus*, 137
S-Adenosylmethionine in vacuole of *Candida utilis*, 841
Adenoviruses, cytopathic index of, 379
Aeration, effect of, on spore formation of *Bacillus stearothermophilus*, 625
Aerococcus viridans, relationship to *Pediococcus homari*, 175
Agglutinogens of endospores of *Bacillus anthracis* and *Bacillus cereus*, 435
Agrobacterium radiobacter, inhibition of, by an antibiotic, 889
— *tumefaciens*, inhibition of, by an antibiotic, 889
— —, production of antibiotic by, 889
— —, release of P^{32} and S^{35} by labeled, 880
Alanine, content of, in streptococcal cell walls, 33
—, inhibition of serine, in nutrition of *Leuconostoc mesenteroides*, 519
— — — — — — — *Pasteurella pestis*, 539
Albumin complex, stimulation of *Pasteurella pestis* by, 905
Aldonic acids, production of, by pseudomonads, 346
Algae, marine, production of antibacterial substances by, 459
Alkalescens-Dispar group, antigens in, 789
Alkylating agents, induction of mutations in *Escherichia coli* by, 464
Amethopterin inhibition by 2-methyladenine, prevention of, 384
Amino acid, composition of cell walls of streptococci, 33
— —, requirements of *Pasteurella pestis*, 299
— — — — — *Sarcina ventriculi*, 860
— acids, effect of, in nutrition of *Leuconostoc mesenteroides*, 519
— —, induction of morphological aberrations in *Rhodospirillum rubrum*, 213
— —, metabolism of, by *Clostridium aminobutyricum*, sp. n., 544
— —, — —, by *Clostridium aminovalericum* sp. n., 549
— —, release of, from enterococci, 682
5 - Amino - 2,4 - bis(substituted - amino)pyrimidines, induction of enzymes in *Escherichia coli* by, 43, 51
—, sparing effect of, on folic acid requirements of *Streptococcus lactis*, 55
Aminobutyric acid, metabolism of, by *Clostridium aminobutyricum* sp. n., 544
Aminopterin, uptake of, by *Bacillus subtilis*, 827, 835
Aminovaleric acid, metabolism of, by *Clostridium aminovalericum* sp. n., 549
Ammonia, content of, in streptococcal cell walls, 33
—, formation of, by *Pseudomonas aeruginosa*, 875
Anaerobiosis, effect of, on electrophoretic mobility of *Pasteurella pestis*, 734
Antibiotic-producing actinomycetes, rules for classification of, 75
Antibiotic, production of, by *Agrobacterium tumefaciens*, 889
Antibiotics, production of, by marine algae, 459
Antibodies, staphylococcal, production of, after injection with *Listeria monocytogenes*, 456
Antibody response of man to canine distemper virus, 616
Antigenic relationship of *Torulopsis glabrata* to species of the genus *Candida*, 677
Antigens, B and L, of *Escherichia coli*, 789
— in Alkalescens-Dispar group, 789
— of chloramphenicol-resistant strains of *Salmonella typhosa*, 863
— — staphylococcal enterotoxin, 849
— — *Torulopsis glabrata*, 677

[1] All entries indexed to first page of article.

—, surface, of *Escherichia coli*, 198
Antimetabolites, effect of, on synthesis of citrovorum factor by *Streptococcus faecalis*, 306
Antipeptidase, histidine, 95
Antitoxin for toxin of *Bacillus anthracis*, 450
Arginine, content of, in streptococcal cell walls, 33
—, utilization of, in protein synthesis, by *Escherichia coli*, 794
Arthrospores, *Coccidioides immitis*, X-irradiation of, 480
Ascospore formation in *Schizosaccharomyces octosporus*, cytology of, 331, 417
— structure of *Schizosaccharomyces octosporus*, 411
Ascosporogenesis, in *Schizosaccharomyces octosporus*, 411
Aspartate transport in *Bacterium cadaveris*, 125
Aspartic acid, content of, in streptococcal cell walls, 33
Aspergillus flavus, nitrate formation by, 553
Assimilation, oxidative, in *Nocardia corallina*, 9
Aureomycin, resistance of *Escherichia coli* to, 527
Autolysis and liberation of toxin in *Clostridium botulinum*, 18
Auxotrophic mutants of sporeforming bacteria, 309
Azotobacter agilis, permeability of, to succinate and malate, 394

Bacillus anthracis, agglutinogens of endospores of, 435
— —, germination rates of spores of, 755
— —, toxin production by, 450
— —, virulence tests for spores of, 594
— *brevis*, viability of spores of, 361
— *cereus*, agglutinogens of endospores of, 435
— *cereus*, biochemical changes during sporulation of, 1
— —, inhibition of sporulation of, by picolinic acid, 1
— —, origin of deoxyribonucleic acid in spores of, 661
— *macerans*, viability of spores of, 361
— *megaterium*, nucleic acid content of, 638
— —, origin of deoxyribonucleic acid in spores of, 661
— —, protoplasts of, 638
— —, release of dipicolinic acid from spores of, 650
— —, spheroidal forms of, induced by potassium tellurite, 459
— *mycoides* phage, sensitivity of, to gamma rays, 387
— *stearothermophilus*, factors affecting spore formation of, 625
— —, lipids of, 629
— —, phospholipid of, 629
— —, viability of spores of, 361
— *subtilis*, inhibition of, by an antibiotic, 889
— —, inhibition of growth of, by amethopterin, 384
— —, microsome distribution during germination of spores of, 777
— —, outgrowth of spores from mutants of, 783
— —, trace element requirements of, 564
— —, uptake of aminopterin by, 827, 835
— —, viability of spores of, 361
Bacteria, preparation of, for electron microscopy, 142
Bacteriophage, effect of 5-bromodeoxycytidine on, 666
—, production of coli, in defined media, 81
Bacteriophages, marine, 614
—, sensitivities of, to gamma rays, 387
—, — —, — ionizing radiations, 387
Bacterium cadaveris, aspartate transport in, 125
Basidiomycete, cellulase induction in, 816
Benzidine test for iron porphyrins in microorganisms, 356
Bile acid dehydrogenase in *Escherichia coli*, 145
Biocytin, growth promoting effect of, for *Candida albicans*, 674
Biotin analogues, growth promoting effect of, for *Candida albicans*, 674
— requirements of *Dipodascus uninucleatus*, 150
— — — *Pasteurella pestis*, 299
— — — *Sarcina ventriculi*, 860
Biotinol, growth-promoting effect of, for *Candida albicans*, 674
Birds, antarctic, intestinal flora of, 311
Botulinal toxin, type A, oral toxicity of, in mice, 406
— —, — D, purification and detoxification of, 372
5-Bromodeoxycytidine, effect of, in *Escherichia coli*, 666
—, — —, on coliphages, 666

C^{14}-labeled substrates, incorporation of, in violacein, 729
CO_2 fixation by minute streptococci, mode of, 295
—, role of, in dimorphism of *Coccidioides immitis*, 308
Canavanine, inhibition of growth produced by, in *Escherichia coli*, 794
Candida albicans, antigenic relationship of, to *Torulopsis glabrata*, 677
— —, growth-promoting effect of biotin analogues for, 674
— *guilliermondii*, antigenic relationship of, to *Torulopsis glabrata*, 677
— *krusei*, antigenic relationship of, to *Torulopsis glabrata*, 677
— *parapsilosis* antigenic relationship of, to *Torulopsis glabrata*, 677
— *pseudotropicalis*, antigenic relationship of, to *Torulopsis glabrata*, 677

— *stellatoidea*, antigenic relationship of, to *Torulopsis glabrata*, 677
— *tropicalis*, antigenic relationship of, to *Torulopsis glabrata*, 677
— —, identification of, 369
— *utilis*, ultraviolet photomicrographs of, 841
— —, vacuole of, 841
Canine distemper virus, antibody response of man to, 616
Capsule on *Escherichia coli*, 789
Capsules of Enterobacteriaceae, demonstration of, 198
— — *Escherichia coli*, demonstration of, 198
Carbohydrates, catabolism of, in pseudomonads, 601
Carbon films for electron microscopic observation of bacteria, 760
Carnosinase, relationship to peptidase in *Clostridium tetani*, 95
Catabolism of carbohydrates in pseudomonads, 601
— — — — zymomonads, 601
Caulobacter vibrioides, electron micrographs of, on carbon films, 760
Cell division in *Sarcina lutea*, electron microscopy of, 132
— wall of *Mycobacterium tuberculosis*, electron micrograph of, 142
Cellulase, induction of, in fungi, 816
Chloramphenicol, effect of, on survival of ultraviolet irradiated *Escherichia coli*, 277
—, inhibition of nucleic acid synthesis in *Escherichia coli* by, 122
Chloramphenicol-resistant strains of *Salmonella typhosa*, 863
Chnoospora minima, antibiotic production by, 459
Cholic acid, growth of *Escherichia coli* on, 145
Chorioallantoic membrane-dropping apparatus, 310
Chromobacterium violaceum, violacein synthesis by, 729
Chromosome, sex factor affinity locus on, of *Escherichia coli*, 321
Citronellol, degradation of, by *Pseudomonas citronellolis* sp.n., 426
Citrovorum factor in psittacosis group of microorganisms, 741
— — requirement of *Pediococcus cerevisiae*, 524
— —, synthesis of, by *Streptococcus faecalis*, 306
Citrulline, utilization of, by *Escherichia coli*, 794
Cladophoropsis gracillima, antibiotic production by, 459
Classification of actinomycetes, 65, 75
Clostridia, methods for identification of, 119
Clostridium acidi-urici, serine dehydrase from, 474
— *aminobutyricum* sp. n., characteristics of, 544
— — — —, metabolism of amino acids by, 544
— *aminovalericum* sp. n., characteristics of, 549
— — — —, metabolism of amino acids by, 549
— *bifermentans*, colony fluorescence of, 292
— —, identification of, 119
— *botulinum*, colony fluorescence of, 292
— —, identification of, 119
— —, toxin production by, physiology of, 18, 24
— — type D toxin, purification and detoxification of, 372
— —, viability of spores of, 361
— *capitovale*, colony fluorescence of, 292
— —, identification of, 119
— *carnis*, colony fluorescence of, 292
— —, identification of, 119
— *difficile*, colony fluorescence of, 292
— —, identification of, 119
— — in intestine of seal, 311
— *histolyticum*, colony fluorescence of, 292
— —, identification of, 119
— —, peptidases produced by, 191
— —, proteinases produced by, 191
— —, toxicity of enzymes from, 191
— *novyi*, colony fluorescence of, 292
— *parabotulinum*, colony fluorescence of, 292
— —, identification of, 119
— *perfringens*, colony fluorescence of, 292
— —, identification of, 119
— — in intestine of seal, 311
— *septicum*, colony fluorescence of, 292
— —, identification of, 119
— *sordellii* in intestine of seal, 311
— *sporogenes*, colony fluorescence of, 292
— —, identification of, 119
— *sticklandii*, synthesis of adenine-B_{12} coenzyme by, 904
— *tertium*, colony fluorescence of, 292
— *tetani*, colony fluorescence of, 292
— —, hydrolysis of histidine peptides by, 95
— —, identification of, 119
— *tetanomorphum*, colony fluorescence of, 292
— —, identification of, 119
Coagulase-positive staphylococci, egg yolk agar for isolation of, 753
Coagulase, staphylococcal, purification of, 807
Cobalamines, metabolism of, by a soil microorganism, 619
Cocci, tetrad-forming, from meat-curing brines, 175
Coccidioides immitis arthrospores, x-irradiation of, 480
— —, role of CO_2 in dimorphism in, 308
Coconut water, stimulation of *Pasteurella pestis* by, 905
Coliphage, effect of 5-bromodeoxycytidine on, 666
—, sensitivity of, to gamma rays, 387
Colonies of clostridia, identification of, by neutral red fluorescence, 292

Copper, requirements of, for mycobacillin formation by *Bacillus subtilis*, 564
Counting of mixed bacterial populations, 457
— procedure for phase contrast microscopy, 155
Coxiella burnetii in vaccine, safety test for, 747
Crown-gall bacteria, release of P^{32} and S^{35} by labeled, 880
Cryptococcus laurentii, identification of, 369
Crystal violet, absorption of, by microorganisms, 461
Cysteine, inhibition of histidine peptidase by, 95
— in nutrition of *Lactobacillus fermenti*, 181
Cytochrome pigments in microorganisms, 356
Cytochromes, in *Pasteurella tularensis*, 800
—, role of, in aldonic acid formation by pseudomonads, 346
Cytology of large spirilla, 612
— — oral fusobacteria, 716
— — pleuropneumonia-like organisms in tissue cells, 267
— — *Schizosaccharomyces octosporus*, 331, 417
Cytopathic index, tissue-culture infectivity of viruses by, 379
Cytophaga species, phage for marine, 614
Cytoplasmic membrane syntheses in *Rhodospirillum rubrum*, 213

Deaminase, serine, induction of, in *Escherichia coli*, 43
Debaryomyces kloeckeri, identification of, 369
Dehydrase, serine, from *Clostridium acidi-urici*, 474
Dehydrogenase, 3-hydroxy bile acid, in *Escherichia freundii*, 145
—, of *Mycobacterium tuberculosis*, effect of isoniazid on, 236
Dehydrogenases in *Lactobacillus brevis*, 763
Deoxyribonucleates, transformation of *Neisseria meningitidis* by, 579
Deoxyribonucleic acid content of *Bacillus megaterium*, 638
— — — — *Proteus vulgaris*, 638
— — digests, effect of, on deoxyribonucleic acid synthesis by pneumococci, 246
— — —, — —, — population changes of pneumococci, 246
— — in *Escherichia coli*, 166
— — — *Haemophilus influenzae*, X-ray-induced breakdown of, 707
— —, origin of, in bacterial spores, 661
Dethiobiotin, growth-promoting effect of, for *Candida albicans*, 674
2,4-Dichlorophenoxyacetic acid (2,4-D), inhibition of aspartate transport by, 125
Dictyota divaricata, antibiotic production by, 459
5,6-Dimethylbenzimidazole-cyano-cobalamin, metabolism of, by a soil microorganism, 619
Dimorphism in *Coccidioides immitis*, role of CO_2 in, 308
Diphosphopyridine nucleotide, degradation of, by *Haemophilus influenzae* and *Haemophilus aegypticus*, 137
Dipicolinic acid, release of, from spores of *Bacillus megaterium*, 650
Diplococcus pneumoniae, deoxyribonucleic acid synthesis by, effect of deoxyribonucleic acid digests on, 246
— —, population changes of, effect of deoxyribonucleic acid digests on, 246
Dipodascus uninucleatus, nutrition of, 150
Disaccharides, oxidation of, to aldonic acids, by pseudomonads, 346
Dissociation of germination from outgrowth of spores of *Bacillus subtilis*, 783
Disulfides of thiamine in nutrition of *Lactobacillus fermenti*, 181

Egg candler apparatus, 310
— yolk agar for isolation of staphylococci, 753
Eggs, embryonated, titration of psittacosis virus in, 899
Electron micrographs of *Caulobacter vibrioides*, 760
— — — large spirilla, 612
— — — oral fusobacteria, 716
— — — pleuropneumonia-like organisms in tissue cells, 267
— — — *Staphylococcus aureus*, 760
— — — ultrathin sections of *Sarcina lutea*, 132
— — — — — — *Streptococcus pyogenes*, 103
— microscopic observation of bacteria, carbon films for, 760
— microscopy of *Sarcina lutea*, 132
— — — *Schizosaccharomyces octosporus*, 331, 417
— —, preparation of microorganisms for, 142
— transport in *Escherichia coli*, 527
Element, trace, requirements of *Bacillus subtilis*, 564
Endogenous respiration of *Pseudomonas aeruginosa*, 875
Endospores of *Bacillus anthracis*, agglutinogens of, 435
— — — *cereus*, agglutinogens of, 435
Enterobacteriaceae, demonstration of capsules of, 198
Enterococci, release of amino acids from, 682
Enteromorpha kylinii, antibiotic production by, 459
— *prolifera*, antibiotic production by, 459
Enterotoxin, staphylococcal, serological studies of, 849
Entner-Doudoroff pathway in glucose catabolism by pseudomonads, 601
Enzymatic basis of resistance of *Escherichia coli* to aureomycin, 527

Enzyme, cellulase, induction of, in fungi, 816
—, coagulase, purification of staphylococcal, 807
— induction by pyrimidines, in *Escherichia coli*, 43, 51
—, isocitratase, in *Escherichia coli*, 341
—, malate synthetase, in *Escherichia coli*, 341
—, serine dehydrase, from *Clostridium acidi-urici*, 474
— synthesis in cell-free preparations of *Escherichia coli*, 157, 166
Enzymes from *Clostridium histolyticum*, toxicity of, 191
— — *Streptomyces albus*, lysis of *Streptococcus pyogenes* by, 103
Epichlorohydrin, induction of mutations in *Escherichia coli* by, 464
Erythromycin, sensitivity of *Pasteurella novicida* to, 155
—, — — — *tularensis* to, 155
Escherichia coli, arginine utilization by, 794
— —, B and L antigens of, 789
— —, capsule on, 789
— —, capsules of, demonstration of, 198
— —, citrulline utilization by, 794
— —, deoxyribonucleic acid in, 166
— —, effect of 5-bromodeoxycytidine on, 666
— —, — — chloramphenicol on survival of ultraviolet irradiated, 277
— —, electron transport in, 527
— —, enzyme induction by pyrimidines in, 43, 51
— —, — synthesis in cell-free preparations of, 157, 166
— —, β-galactosidase in, 157, 166
— —, gene transfer in bacterial crosses with, 558
— —, genetic recombination in, 321
— —, 3-hydroxy bile acid dehydrogenase in, 145
— —, induction of mutations in, by alkylating agents, 464
— —, inhibition of growth produced by canavanine in, 794
— —, isocitratase in, 341
— —, lysis of, by lysozyme, 697
— —, macromolecular syntheses in cell-free preparations of, 166
— —, malate synthetase in, 341
— —, nutrition of, 81
— —, ornithine utilization by, 794
— —, phage T1-resistant mutants of, 612
— — phages, sensitivity of, to γ-rays, 387
— —, production of coli phage by, in defined media, 81
— —, protoplasts in, 157, 166
— —, resistance of, to aureomycin, 527
— —, ribonucleic acid in, 166
— —, sex factor of, 321
— —, spheroplasts from, 697
— —, synthesis of nucleic acid by, in synchronized cultures, 122
Ethyl sulfate, induction of mutations in *Escherichia coli* by, 464
Ethyl-thioisonicotinamide, effect of, on dehydrogenase of *Mycobacterium tuberculosis*, 236
Ethylenediaminetetraacetate, effect of, on lipid synthesis by yeast, 691

L-Forms of bacteria in tissue cell cultures, 869
Fat bodies in *Nocardia corallina*, 756
Ferrous-ion-oxidizing bacterium, 502
Folic acid requirements of *Streptococcus lactis*, sparing effect of amino pyrimidines on, 55
Formic acid, production of, by *Leuconostoc mesenteroides*, 411
Fructokinase in *Lactobacillus brevis*, 763
— — *Pseudomonas aeruginosa*, 90
Fructose dissimilation by *Lactobacillus brevis*, 763
Fungi, cellulase induction in, 816
Fungizone, effect of, on growth of *Histoplasma capsulatum*, 442
Fusobacterium nucleatum, morphology of, 716
— *polymorphum*, morphology of, 716

Gaffkya homari, relationship to *Pediococcus homari*, 175
β-Galactosidase in *Escherichia coli*, 157, 166
—, induction of, in *Escherichia coli*, 43, 51
Gamma rays, sensitivities of bacteriophages to, 387
Gene transfer in bacterial crosses with *Escherichia coli*, 558
Genetic recombination in *Escherichia coli*, 321
— variation in sex factor of *Escherichia coli*, 321
Germination of ascospores of *Schizosaccharomyces octosporus*, 411
— — bacterial spores, microsome distribution during, 777
— rates of spores of *Bacillus anthracis*, 755
Glucokinase in *Pseudomonas aeruginosa*, 90
Glucose, assimilation of, by *Nocardia corallina*, 9
Glucose-C^{14}, fermentation of, by *Leuconostoc mesenteroides*, 411
Glutamic acid, content of, in streptococcal cell walls, 33
Glycerol kinase in *Streptococcus faecalis*, 532
—, metabolism of, by an acrolein-forming lactobacillus, 261
— oxidation in *Streptococcus faecalis*, mechanism of, 532
Glycerophosphate oxidase in *Streptococcus faecalis*, 532
Glycine, content of, in streptococcal cell walls, 33
— inhibition of serine in nutrition of *Leuconostoc mesenteroides*, 519
— — — — — — — — *Pasteurella pestis*, 539
β-Glycosidic linkage, induction of cellulase in fungi by, 816
Glyoxylate cycle in *Micrococcus sodonensis*, 113

Gracilariopsis sjoestedtii, antibiotic production by, 459
Gram-positiveness, measurement of, 461
Guanine requirements of *Pasteurella tularensis*, 566

Haemophilus aegypticus, degradation of nucleotides by, 137
— *influenzae*, degradation of nucleotides by, 137
— *influenzae*, X-ray-induced breakdown of deoxyribonucleic acid in, 707
Hansenula anomala, identification of, 369
HeLa cells, infection of, with herpes simplex virus, 657
Hemin requirements of *Pasteurella pestis*, 299
Hemolysin, lethal activity of, for mice, 496
— of group A streptococci, 488, 496
Herpes simplex virus, infection of HeLa cells with, 657
Hexosamine in *Rhodospirillum rubrum*, 213
Histidine peptides, hydrolysis of, by *Clostridium tetani*, 95
— —, role of, in tetanus toxin production, 95
Histoplasma capsulatum, effect of mycostatin and fungizone on, 442
Homobiotin, growth-promoting effect of, for *Candida albicans*, 674
Humicola fuscoatra, cellulase induction in, 816
3-Hydroxy bile acid dehydrogenase in *Escherichia freundii*, 145
β-Hydroxypropionic acid, formation of, from glycerol, by a lactobacillus, 261

Identification of clostridia, methods for, 119
— — yeasts, 369
Infrared spectroscopy for detecting lipids in mycobacteria, 217
Inhibition of growth of *Salmonella typhosa* by rhamnose, 58
— — sporulation of *Bacillus cereus*, 1
Intestinal flora of antarctic birds and mammals, 311
Ionizing radiations, sensitivity of bacteriophages to, 387
Iron, ferrous, requirement of serine dehydrase from *Clostridium acidi-urici* for, 474
—, requirements of, for mycobacillin formation by *Bacillus subtilis*, 564
Iron-oxidizing bacterium, characteristics of, 502
Iron porphyrins in microorganisms, benzidine test for, 356
Isocitratase in *Escherichia coli*, 341
— — *Micrococcus sodonensis*, 113
Isoleucine, content of, in streptococcal cell walls, 33
Isomerase in *Lactobacillus brevis*, 763
—, rhamnose, synthesis of, in *Salmonella typhosa*, 58
Isoniazid, effect of, on dehydrogenase of *Mycobacterium tuberculosis*, 236
Isoprenoid compounds, degradation by *Pseudomonas citronellolis* sp.n., 426

Karyogamy, cytology of *Schizosaccharomyces octosporus* during, 331
Ketoglutaric acid requirements of *Pasteurella pestis*, 299

L-forms of *Proteus mirabilis*, 510
— — — *vulgaris*, growth of, 638
Lactate, metabolism of, by *Micrococcus sodonensis*, 113
Lactic acid, production of, by *Leuconostoc mesenteroides*, 411
Lactobacillus brevis, acetokinase in, 763
— —, dehydrogenases in, 763
— —, fructokinase in, 763
— —, fructose dissimilation by, 763
— —, isomerase in, 763
— —, mannitol dehydrogenase in, 763
— *fermenti*, growth factors for, 181
— —, nutrition of, 181
—, glycerol metabolism by a, 261
— *plantarum*, iron porphyrins in, 356
Lactose-fermenting properties of salmonellae, acquisition of, 203
Leucine, content of, in streptococcal cell walls, 33
Leuconostoc mesenteroides, fermentation of glucose and xylose by, 411
— —, nutrition of, 519
Leucovorin factor, *see* citrovorum factor
Lipid of *Trichophyton mentagrophytes*, 154
— synthesis by homogenates of yeast, 691
Lipids in mycobacteria, 217
— of *Bacillus stearothermophilus*, 629
Listeria monocytogenes, production of staphylococcal antibodies after injection with, 456
Lysine, content of, in streptococcal cell walls, 33
Lysis of *Escherichia coli* by lysozyme, 697
— — *Streptococcus pyogenes* by enzymes from *Streptomyces albus*, 103
Lysozyme, effect of, on lysis of *Escherichia coli*, 697

Macromolecular syntheses in cell-free preparations from *Escherichia coli*, 166
Malate, permeability of *Azotobacter agilis* to, 394
— synthetase in *Escherichia coli*, 341
— — in *Micrococcus sodonensis*, 113
Mammals, antarctic, intestinal flora of, 311
Manganese, activation of histidine peptidase by, 95
—, requirements of, for mycobacillin formation by *Bacillus subtilis*, 564
Mannitol dehydrogenase in *Lactobacillus brevis*, 763

Mannoisomerase in *Pseudomonas aeruginosa*, 90
Marine bacteriophages, 614
Meat-curing brines, tetrad-forming cocci from, 175
Meningopneumonitis virus, synthesis of citrovorum factor by, 741
Metabolism of lactate and acetate by *Micrococcus sodonensis*, 113
Metabolites, screening method for, from *Micrococcus glutamicus*, 754
Methionine, content of, in streptococcal cell walls, 33
2 - Methyladenine - cyano - cobalamin, metabolism of, by a soil microorganism, 619
2-Methyladenine, inhibition of amethopterin by, prevention of, 384
Mice, lethal activity of intracellular hemolysin for, 496
Microbacterium thermosphactum, iron porphyrins in, 356
Micrococcus glutamicus screening method for metabolites of, 754
— *sodonensis*, isocitratase in, 113
— —, malate synthetase in, 113
— —, metabolism of lactate and acetate by, 113
Microsome distribution during germination of bacterial spores, 777
Microsomes of *Bacillus subtilis*, sedimentation constants of, 777
Mitochondria in yeast, 691
Mobility, electrophoretic, of *Pasteurella pestis*, 734
Moisture requirements of *Pseudomonas fluorescens*, 572
Monosaccharides, oxidation of, to aldonic acids, by pseudomonads, 346
Morphology of chloramphenicol-resistant strains of *Salmonella typhosa*, 863
— — large spirilla, 612
— — oral fusobacteria, 716
Mouse pneumonitis virus, synthesis of citrovorum factor by, 741
Mutants of *Bacillus subtilis*, outgrowth of spores from, 783
— — bacteriophage, effect of 5-bromodeoxycytidine on, 666
— — *Coccidioides immitis*, 480
— — *Escherichia coli*, phage T1-resistant, 612
— — *Proteus mirabilis*, 510
— — *Staphylococcus aureus*, inhibition of plasma clotting in, 905
Mutations in *Escherichia coli*, induction of, by alkylating agents, 464
Mycobacillin formation by *Bacillus subtilis*, 564
Mycobacterium bovis, lipids in, 217
— *marianum*, lipids in, 217
— phage, sensitivity of, to gamma rays, 387
— *phlei*, lipids in, 217
— *sabotier*, lipids in, 217
— *smegmatis*, lipids in, 217
— *tuberculosis*, effect of isoniazid on dehydrogenase of, 236
— —, lipids in, 217
Mycoplasma gallisepticum, enumeration of, 615
Mycostatin, effect of, on growth of *Histoplasma capsulatum*, 442
Myrothecium verrucaria, cellulase induction in, 816

N^5-Formyltetrahydrofolic acid, *see* citrovorum factor
Neisseria meningitidis, transformation of, by deoxyribonucleates, 579
Neutral red fluorescence, use of, for identification of colonies of clostridia, 292
New species: *Clostridium aminobutyricum*, characteristics of, 544
— —: — *aminovalericum*, characteristics of, 549
— —, *Pseudomonas citronellolis*, characteristics of, 426
Nicotinic acid requirements of *Sarcina ventriculi*, 860
Nitrate formation by *Aspergillus flavus*, 553
— oxidation, by *Nitrobacter winogradskyi*, 39
Nitrobacter winogradskyi, nitrate oxidation by, 39
Nocardia corallina, fat bodies in, 756
— —, oxidative assimilation in, 9
— —, respiration in, 9
Norbiotin, growth-promoting effect of, for *Candida albicans*, 674
Nuclear division in *Schizosaccharomyces octosporus*, cytology of, 331
Nucleic acid synthesis in synchronized cultures of *Escherichia coli*, 122
— acids in *Escherichia coli*, 166
Nucleotides, degradation of, by *Haemophilus influenzae* and *Haemophilus aegypticus*, 137
Nutrition of *Dipodascus uninucleatus*, 150
— — *Escherichia coli*, 81
— — *Lactobacillus fermenti*, 181
— — *Leuconostoc mesenteroides*, 519
— — *Pasteurella pestis*, 299, 539
— — — *tularensis*, 566
— — *Sarcina ventriculi*, 860

Oral fusobacteria, morphology of, 716
Ornithine, utilization of, by *Escherichia coli*, 794
Oxidation of nitrate by *Nitrobacter winogradskyi*, 39
Oxidative assimilation in *Nocardia corallina*, 9
— metabolism of lactate and acetate by *Micrococcus sodonensis*, 113
Oxybiotin, growth-promoting effect of, for *Candida albicans*, 674

P^{32}, release of, by labeled *Agrobacterium tumefaciens*, 880
pH, effect of, on electrophoretic mobility of *Pasteurella pestis*, 734

—, — —, — viability of bacterial spores, 361
—, — —, — water requirements of *Pseudomonas florescens*, 572
Padina crispata, antibiotic production by, 459
Pantothenate requirements of *Pasteurella pestis*, 299
— — — — *tularensis*, 566
Pasteurella novicida, sensitivity of, to erythromycin, 155
— *pestis*, electrophoretic mobility of, 734
— —, growth of, at 36 C to 38 C, 299
— —, inhibition of growth of, by serine, 539
— —, nutrition of, 299, 539, 905
— *tularensis*, cytochromes in, 800
— —, nutrition of, 566
— —, sensitivity of, to erythromycin, 155
— —, succinoxidase of, 800
Pediococcus cerevisiae, citrovorum factor requirement of, 524
— —, iron porphyrins in, 356
— —, relationship to *Pediococcus homari*, 175
— *homari*, iron porphyrins in, 356
— —, nov. comb., relationship to *Gaffkya homari* and *Aerococcus viridans*, 175
— —, relationship to *Pediococcus cerevisiae*, 175
Penguin, intestinal flora of, 311
Penicillium species, cellulase induction in, 816
Peptidase, histidine, role of, in tetanus toxin production, 95
Peptidases produced by *Clostridium histolyticum*, 191
Peptides, effect of, in nutrition of *Leuconostoc mesenteroides*, 519
Permeability of azotobacter to succinate and malate, 394
Pestalotiopsis westerdijkii, cellulase induction in, 816
Phage assay by plaque count, method of, 758
— for *Staphylococcus aureus*, plaque count for, 758
— T1-resistant mutants of *Escherichia coli*, 612
Phages, marine, 614
Phase contrast microscopy, counting procedure for, 155
Phenylalanine, content of, in streptococcal cell walls, 33
Phosphate-aging effect in *Bacterium cadaveris*, 125
Phosphate, inorganic, role of, in thiosulfate metabolism by *Thiobacillus thioparus*, 313
Phospholipid of *Bacillus stearothermophilus*, 629
Phosphomannoisomerase in *Pseudomonas aeruginosa*, 90
Phosphorus in bacterial spores, 661
Photobacterium phosphoreum, phage for, 614
Photomicrograph of *Sarcina ventriculi*, 857, 860
Picolinic acid, inhibition of sporulation in *Bacillus cereus* by, 1
Pigment synthesis by *Chromobacterium violaceum*, 729
Pigmentation of *Saccharomyces cerevisiae*, 752
Plaque count for phage assay, method of, 758
Plasma clotting, inhibition of, in *Staphylococcus aureus*, 905
Plasmogamy, cytology of *Schizosaccharomyces octosporus* during, 331
Pleuropneumonia-like cultures, enumeration of, 615
— organisms, electron micrographs of, in tissue cells, 267
— — in tissue cell cultures, 869
— — — — culture cells, 267
Pneumococci, deoxyribonucleic acid synthesis by, effect of deoxyribonucleic acid digests on, 246
—, population changes of, effect of deoxyribonucleic acid digests on, 246
Poliovirus, cytopathic index of, 379
Poly-β-hydroxybutyrate in *Pseudomonas pseudomallei*, 305
Polymyxin B, conversion of bacterium to L-phase variant by, 869
Population changes of pneumococci, effect of deoxyribonucleic acid digests on, 246
Potassium tellurite, induction of spheroidal forms in *Bacillus megaterium* by, 459
Proline, content of, in streptococcal cell walls, 33
Propionate, assimilation of, by *Nocardia corallina*, 9
Proteinases produced by *Clostridium histolyticum*, 191
Proteus mirabilis, L-forms of, 510
— *vulgaris*, L-form of, 638
— —, nucleic acid content of, 638
Protoplasts in *Escherichia coli*, 157, 166
— — *Bacillus megaterium*, growth of, 638
— — — *subtilis*, uptake of aminopterin by, 827, 835
Pseudomonad, phage for marine, 614
Pseudomonads, effect of temperature on physiology of, 591
Pseudomonas aeruginosa, catabolism of carbohydrates in, 601
— —, endogenous respiration of, 875
— —, fructokinase in, 90
— —, glucokinase in, 90
— —, mannoisomerase in, 90
— —, phosphomannoisomerase in, 90
— *aromatica*, production of aldonic acids by, 346
— *calco-acetica*, production of aldonic acids by, 346
— *citronellolis* sp. n., characteristics of, 426
— — — —, degradation of isoprenoid compounds by, 426
— *fluorescens*, water requirements of, 572
— phage, sensitivity of, to gamma rays, 387
— *pseudomallei*, poly-β-hydroxybutyrate in, 305
— *quercito-pyrogallica*, production of aldonic acids by, 346

— *reptilivora*, catabolism of carbohydrates in, 601
— *saccharophila*, catabolism of carbohydrates in, 601
Psittacosis group of microorganisms, citrovorum factor in, 741
— virus, titration of, 899
Pteridines, effect of, on uptake of aminopterin by *Bacillus subtilis*, 835
Purine, effect of, on uptake of aminopterin by *Bacillus subtilis*, 835
Purines, substituted, reversal of amethopterin inhibition of *Bacillus subtilis* by, 384
Pyrimidine moiety of thiamin, effect of, on uptake of aminopterin by *Bacillus subtilis*, 827, 835

Q-fever vaccine, safety test for, 747

Radiation inactivation of microorganisms, 707
Radiations, ionizing, sensitivities of bacteriophages to, 387
Recombination, genetic, between sex factor and chromosome in *Escherichia coli*, 321
Respiration, endogenous, of *Pseudomonas aeruginosa*, 875
— in *Nocardia corallina*, 9
Respiratory quotients for endogenous respiration of *Nocardia corallina*, 9
Rhamnose, inhibition of growth of *Salmonella typhosa* by, 58
— isomerase, synthesis of, in *Salmonella typhosa*, 58
Rhamnulokinase, synthesis of, in *Salmonella typhosa*, 58
Rhizobium phage, sensitivity of, to γ-rays, 387
Rhodospirillum rubrum, cytoplasmic membrane syntheses in, 213
— —, hexosamine in, 213
— —, induction of morphological aberrations in, by amino acids, 213
Rhodotorula glutinis, identification of, 369
— *graminis*, identification of, 369
— *marina*, identification of, 369
— *minuta*, identification of, 369
— *mucilaginosa*, identification of, 369
— *texensis*, identification of, 369
Ribonucleic acid content of *Bacillus megaterium*, 638
— — — — *Proteus vulgaris*, 638
— — in *Escherichia coli*, 166
Rules for classification of actinomycetes, 75

S^{35}, release of, by labeled *Agrobacterium tumefaciens*, 880
Saccharomyces cerevisiae, absorption of crystal violet by, 461
— —, lipid synthesis by homogenates of, 691
— —, mitochondria in, 691
— —, pigmentation of, 752
Salmonella glostrup, lactose fermentation by, 203
— *heidelberg*, lactose fermentation by, 203
— *lansing*, new salmonella type, 305
— *minnesota*, lactose fermentation by, 203
— *stanley*, lactose fermentation by, 203
— *typhosa*, chloramphenicol-resistant strains of, 863
— —, inhibition of growth of, by rhamnose, 58
Salmonellae, lactose-fermenting properties of, acquisition of, 203
Sarcina lutea, absorption of crystal violet by, 461
— *lutea*, cell division in, electron microscopy of, 132
— *ventriculi*, nutrition of, 860
— —, photomicrograph of, 857, 860
— —, studies on, 857
Schizosaccharomyces octosporus, cytology of, 331, 417
— —, — — ascospore formation in, 331, 417
— —, electron microscopy of, 331, 417
Seal, intestinal flora of, 311
Sedimentation constants of microsomes of *Bacillus subtilis*, 777
Serine, content of, in streptococcal cell walls, 33
— deaminase, induction of, in *Escherichia coli*, 43
— dehydrase from *Clostridium acidi-urici*, 474
— effect of, in nutrition of *Leuconostoc mesenteroides*, 519
— inhibition of growth of *Pasteurella pestis* by, 539
Sex factor affinity locus on chromosome of *Escherichia coli*, 321
— — of *Escherichia coli*, 321
Shigella dysenteriae, iron porphyrins in, 356
Skua, intestinal flora of, 311
Sparing effect of amino pyrimidines on folic acid requirements of *Streptococcus lactis*, 55
Spheroidal forms of *Bacillus megaterium* induced by potassium tellurite, 459
Spheroplasts from *Escherichia coli*, 697
Spirillum undula, cytology of, 612
Spore formation of *Bacillus stearothermophilus*, factors affecting, 625
Spores, bacterial, microsome distribution during germination of, 777
—, —, viability of, 361
— from mutants of *Bacillus subtilis*, outgrowth of, 783
— of *Bacillus anthracis*, germination rates of, 755
— — — — —, virulence tests for, 594
— — — *megaterium*, release of dipicolinic acid from, 650
— — — *stearothermophilus*, lipids of, 629
—, origin of deoxyribonucleic acid in, 661
Sporeforming bacteria, auxotrophic mutants of, 309
Sporotrichum pruinosum, cellulase induction in, 816

Sporulation of *Bacillus cereus*, biochemical changes during, 1
— — — —, inhibition of, by picolinic acid, 1
Spyridia filamentosa, antibiotic production by, 459
Staphylococcal antibodies, production of, after injection with *Listeria monocytogenes*, 456
— coagulase, purification of, 807
— enterotoxin, serological studies of, 849
Staphylococci, egg yolk agar for isolation of, 753
Staphylococcus aureus, electron micrographs of, on carbon films, 760
— —, inhibition of plasma clotting in, 905
— —, iron porphyrins in, 356
— — phage, plaque count for, 758
— —, release of amino acids from, 682
— phage, sensitivity of, to gamma rays, 387
Starch hydrolyzing streptococci, 230
Stickland-type fermentation by *Clostridium sticklandii*, 904
Streptococcal cell walls, amino acid composition of, 33
Streptococci, group A, amino acid composition of cell walls of, 33
—, minute, CO_2 fixation by, 295
—, starch-hydrolyzing, 230
Streptococcus anginosus, CO_2 fixation by, 295
— *bovis*, starch hydrolysis by, 230
— *equinus*, starch hydrolysis by, 230
— *faecalis*, mechanism of glycerol oxidation in, 532
— —, release of amino acids from, 682
— —, synthesis of citrovorum factor by, 306
— *faecium*, release of amino acids from, 682
— *inulinaceus*, starch hydrolysis by, 230
— *lactis*, folic acid requirements of, sparing effect of amino pyrimidines on, 55
— *pyogenes*, cell lysis and digestion of by enzymes from *Streptomyces albus*, 103
— —, ultrathin sections of, 103
Streptolysin S′, relation to intracellular hemolysin of group A streptococci, 488, 496
Streptomyces albus, lysis of *Streptococcus pyogenes*, by enzymes from, 103
— species, cellulase induction in, 816
Succinate, permeability of *Azotobacter agilis* to, 394
Succinic acid, production of, by *Leuconostoc mesenteroides*, 411
Succinoxidase of *Pasteurella tularensis*, 800
Synchronized cultures of *Escherichia coli*, nucleic acid synthesis in, 122

Taxonomy of actinomycetes, 65, 75
Temperature, effect of, on electrophoretic mobility of *Pasteurella pestis*, 734
—, — —, — physiology of achromobacters, 591
—, — —, — — — pseudomonads, 591
—, — —, — viability of bacterial spores, 361
—, — —, — water requirements of *Pseudomonas fluorescens*, 572
—, relationship of, to infection of HeLa cells with herpes simplex virus, 657
Tetanus toxin synthesis, peptidases in, 95
Tetracycline-resistant mutants of *Staphylococcus aureus*, inhibition of plasma clotting in, 905
Tetrathionate, intermediate in thiosulfate oxidation by *Thiobacillus thioparus*, 313
Thiamine, a growth factor for *Lactobacillus fermenti*, 181
— requirements of *Dipodascus uninucleatus*, 150
— — — — *Pasteurella pestis*, 299
Thiobacillus thioparus, role of inorganic phosphate in metabolism of thiosulfate by, 313
Thiosulfate metabolism by *Thiobacillus thioparus*, role of inorganic phosphate in, 313
Threonine, content of, in streptococcal cell walls, 33
— inhibition of serine in nutrition of *Leuconostoc mesenteroides*, 519
Tissue cell cultures, contamination of, with pleuropneumonia-like organisms, 869
— culture cells, pleuropneumonia-like organisms in, 267
— —, growth of *Histoplasma capsulatum* in, 442
— — infectivity of viruses, 379
Tobacco mosaic virus, electron micrograph of, 142
Torulopsis glabrata, antigens of, 677
Toxicity in mice of botulinal type A toxin, 406
— of enzymes from *Clostridium histolyticum*, 191
Toxin, *Bacillus anthracis*, characterization of, 450
—, — —, production of, 450
—, botulinal type A, oral toxicity of, in mice, 406
—, botulinum, activation of, 24
— "precursors" in *Clostridium botulinum*, 24
— production by *Clostridium botulinum*, physiology of, 18, 24
—, type D botulinal, purification and detoxification of, 372
Toxoid, type D botulinal, immunological response to, 372
Transformation of *Neisseria meningitidis* by deoxyribonucleates, 579
Tricarboxylic acid cycle in *Micrococcus sodonensis*, 113
Trichoderma viride, cellulase induction in, 816
Trichophyton mentagrophytes, lipid of, 154
Trimethylene glycol, formation of, from glycerol, by a lactobacillus, 261
Tryptophan, incorporation of, in violacein, by *Chromobacterium violaceum*, 729
Tyrosine, content of, in streptococcal cell walls, 33

Ultrathin sections of *Sarcina lutea*, 132
Ultraviolet irradiated *Escherichia coli*, effect of chloramphenicol on survival of, 277
— photomicrographs of *Candida utilis*, 841

Uracil requirements of *Pasteurella tularensis*, 566
Uric acid fermentation by *Clostridium acidi-urici*, 474
Uridine diphosphoglucose, degradation of, by *Haemophilus influenzae* and *Haemophilus aegypticus*, 137

Vaccine, Q fever, safety test for, 747
Vacuole in *Schizosaccharomyces octosporus*, cytology of, 331
— of *Candida utilis*, S-adenosylmethionine in, 841
Valine, content of, in streptococcal cell walls, 33
Variants of *Bacillus anthracis*, virulence of, 594
Vibrio fetus, quantity production of, 752
Violacein synthesis by *Chromobacterium violaceum*, 729
Virulence tests for spores of *Bacillus anthracis*, 594
Virus, canine distemper, antibody response of man to, 616
—, herpes simplex, infection of HeLa cells with, 657
—, meningopneumonitis, synthesis of citrovorum factor by, 741
—, mouse pneumonitis, synthesis of citrovorum factor by, 741
—, psittacosis, titration of, 899
Viruses, cytopathic index of, 379
—, preparation of, for electron microscopy, 142
Vitamin requirements of *Pasteurella pestis*, 299

Water requirements of *Pseudomonas fluorescens*, 572

Xanthomonas phage, sensitivity of, to gamma rays, 387
X-irradiation of *Coccidioides immitis* arthrospores, 480
X-ray-induced breakdown of deoxyribonucleic acid in *Haemophilus influenzae*, 707
Xylose-C^{14}, fermentation of, by *Leuconostoc mesenteroides*, 411

Yeast, lipid synthesis by homogenates of, 691
—, mitochondria in, 691
Yeasts, identification of, 369

Zinc, activation of histidine peptidase by, 95
Zymomonas mobilis, catabolism of carbohydrates in, 601

Ex officio

Charles A. Evans, President of the Society (1960), University of Washington, Seattle, Washington.
Herald R. Cox, Vice President (1960), Lederle Laboratories, Inc., Pearl River, New York.
E. M. Foster, Secretary, University of Wisconsin, Madison, Wisconsin.
J. H. Bailey, Treasurer, Sterling-Winthrop Research Institute, Rensselaer, New York.

CONTENTS

No. 1, JANUARY 1960

Biochemical Changes Occurring during Sporulation of *Bacillus cereus*. Inhibition of Sporulation by α-Picolinic Acid. Krishnamurty G. Gollakota and H. Orin Halvorson 1–8

Endogenous Respiration and Oxidative Assimilation in *Nocardia corallina*. Graeme G. Midwinter and Richard D. Batt 9–17

Physiology of Toxin Production by *Clostridium botulinum* Types A and B. I. Growth, Autolysis, and Toxin Production. Peter F. Bonventre and Lloyd L. Kempe 18–23

Physiology of Toxin Production by *Clostridium botulinum* Types A and B. IV. Activation of the Toxin. Peter F. Bonventre and Lloyd L. Kempe 24–32

Studies of Streptococcal Cell Walls. V. Amino Acid Composition of Cell Walls of Virulent and Avirulent Group A Hemolytic Streptococci. B. S. Tepper, J. A. Hayashi, and S. S. Barkulis 33–38

Kinetics of the Nitrite Oxidation by *Nitrobacter winogradskyi*. H. Laudelout and L. van Tichelen 39–42

Stimulation of Enzyme Induction by 5-Amino-2,4-bis(substituted-amino)pyrimidines. Ralph E. Kunkee 43–50

Enzyme Induction in Nutritional Mutants in Presence of 5-Amino-2,4-bis(substituted-amino)pyrimidines. Ralph E. Kunkee 51–54

Sparing Effect on the Folic Acid Requirement of *Streptococcus lactis* by 5-Amino-2,4-bis(substituted-amino)pyrimidines. Ralph E. Kunkee 55–57

Inhibition of the Growth of *Salmonella typhosa* by L-Rhamnose. Ellis Englesberg 58–64

Taxonomic Principles in the Actinomycetes. N. A. Krasil'nikov 65–74

Rules for the Classification of Antibiotic-Producing Actinomycetes. N. A. Krasil'nikov 75–80

Growth of *Escherichia coli* and Production of Bacteriophage in Defined Media. Henry Z. Sable, Fillmore K. Bagatell, Elmer M. Wright, John Spizizen, and Patricia A. Edwards 81–89

Enzymatic Patterns of Adaptation to Fructose, Glucose, and Mannose Exhibited by *Pseudomonas aeruginosa*. R. G. Eagon and A. K. Williams 90–94

Formation and Action of a Peptidase Which Hydrolyzes Histidine Peptides Required in Tetanus Toxin Synthesis. Pauline A. Miller, Clarke T. Gray, and Monroe D. Eaton 95–102

Studies on *Streptococcus pyogenes*. V. Biochemical and Microscopic Aspects of Cell Lysis and Digestion by Enzymes from *Streptomyces albus*. Hutton D. Slade and William C. Slamp 103–112

Oxidative Metabolism of Lactate and Acetate by *Micrococcus sodonensis*. Jerome J. Perry and James B. Evans 113–118

Rapid Methods for the Identification of Clostridia. Leo Kaufman and R. H. Weaver 119–121

Inhibition of Nucleic Acid Synthesis by Chloramphenicol in Synchronized Cultures of *Escherichia coli*. C. O. Doudney 122–124

Aspartate Transport in *Bacterium cadaveris* with Special Reference to the Phosphate Aging Effect. Virginia R. Williams 125–131

Electron Microscopy of Cellular Division in *Sarcina lutea*. George B. Chapman 132–136

Degradation of Certain Nucleotides by *Haemophilus influenzae* and *Haemophilus aegyptius*. Robert W. Wheat and Margaret Pittman 137–141

Preparation of Microorganisms for Electron Microscopy. Edgar Ribi, William Brown, and Granville Goode 142–144

3-Hydroxy Bile Acid Dehydrogenase from *Escherichia freundii*. Osamu Hayaishi, Clarence Slaughter, and William B. Jakoby 145–149

Nutrition of *Dipodascus uninucleatus*. Harold N. Kuehn 150–153

NOTES:

Total Lipid of *Trichophyton mentagrophytes*. Herbert N. Prince 154
Counting Procedure for Phase Contrast Microscopy. C. Weibull 155
Sensitivity *in Vitro* of Eighteen Strains of *Pasteurella tularensis* to Erythromycin. Joseph Z. Biegeleisen, Jr., and Max D. Moody 155–156

No. 2, February 1960

Induced Enzyme Synthesis in Cell-Free Preparations of *Escherichia coli*. John M. Reiner 157–165
Macromolecular Syntheses in Cell-Free Preparations from *Escherichia coli*. John M. Reiner 166–174
Comparative Study of *Gaffkya homari*, *Aerococcus viridans*, Tetrad-Forming Cocci from Meat Curing Brines, and the Genus *Pediococcus*. R. H. Deibel and C. F. Niven, Jr. 175–180
Activation of the Disulfide Forms of Thiamine and Its Phosphates as Growth Factors for *Lactobacillus fermenti*. Z. G. Bánhidi 181–190
Toxicity of Enzymes from *Clostridium histolyticum*. Edward L. Howes, Ines Mandl, and Stephen Zaffuto 191–197
Method for Demonstrating Capsules of Enterobacteriaceae. K. Sahab 198–202
Acquisition of Lactose Fermenting Properties by Salmonellae. II. Role of the Medium. S. Schäfler, Leonie Mintzer, and Cătălina Schäfler 203–212
Induction of Morphological Aberrations in *Rhodospirillum rubrum* by D-Amino Acids. Alice L. Tuttle and Howard Gest 213–216
Detection of Specific Lipids in Mycobacteria by Infrared Spectroscopy. D. W. Smith, H. M. Randall, A. P. MacLennan, R. K. Putney, and S. V. Rao 217–229
Starch Hydrolyzing Streptococci. Harry W. Seeley and Joel A. Dain 230–235
Effect of Isoniazid on the Dehydrogenase Activity of *Mycobacterium tuberculosis*. Werner B. Schaefer 236–245
Effects of Enzymatic Deoxyribonucleic Acid Digests on Population Changes and Deoxyribonucleic Acid Synthesis on Pneumococci. William Firshein and Werner Braun 246–260
Metabolism of Glycerol by an Acrolein-Forming Lactobacillus. M. Sobolov and K. L. Smiley 261–266
Fine Structure of Pleuropneumonialike Organisms in Pure Culture and in Infected Tissue Culture Cells. George A. Edwards and Jørgen Fogh 267–276
Effect of Chloramphenicol on the Survival of *Escherichia coli* Irradiated with Ultraviolet Light. Hiromu Okagaki 277–291
Use of Neutral Red Fluorescence for the Identification of Colonies of Clostridia. Leo Kaufman and R. H. Weaver 292–294
Mode of CO_2 Fixation by the Minute Streptococci. William R. Martin and C. F. Niven, Jr. 295–298
Nutrition of *Pasteurella pestis* in Chemically Defined Media at Temperatures of 36 to 38 C. W. J. Brownlow and G. E. Wessman 299–304

NOTES:

New Salmonella Type: *Salmonella lansing*. Helen Bilanow and Arnold P. Juenker 305
Occurrence of Poly-β-hydroxybutyrate in *Pseudomonas pseudomallei*. H. B. Levine and H. Wolochow 305–306
Comparative Effects of Various Antimetabolites on Growth and Synthesis of Citrovorum Factor by *Streptococcus faecalis*. Robert C. Wood, Arthur Geltzer, and George H. Hitchings 306–307
Role of Carbon Dioxide in the Dimorphism of *Coccidioides immitis*. George W. Lones and Carl L. Peacock 308–309
Concentration and Isolation of Auxotrophic Mutants of Sporeforming Bacteria. V. Iyer 309–310

Combination Egg Candler and Chorioallantoic Membrane Dropping Apparatus. Lee Ernest Carey and Nicholas Hahon 310–311
Intestinal Flora of Some Antarctic Birds and Mammals. R. H. McBee 311–312

No. 3, March 1960

Role of Inorganic Phosphate in Thiosulfate Metabolism by *Thiobacillus thioparus*. Melvin Santer, Maurice Margulies, Norman Klinman, and Ronald Kaback 313–320
Genetic Variation in the Sex Factor of *Escherichia coli*. Edward A. Adelberg and Sarah N. Burns 321–330
Electron Microscopy of Ultrathin Sections of *Schizosaccharomyces octosporus*. II. Morphological and Cytological Changes Preceding Ascospore Formation. S. F. Conti and H. B. Naylor 331–340
Occurrence and Function of Isocitritase and Malate Synthetase in Bacteria. Henry C. Reeves and Sam Ajl 341–345
Oxidation of Mono- and Disaccharides to Aldonic Acids by *Pseudomonas* Species. Ronald Bentley and Libor Slechta 346–355
Modified Benzidine Test for the Detection of Cytochrome-Containing Respiratory Systems in Microorganisms. R. H. Deibel and James B. Evans 356–360
Influence of Preheating, pH, and Holding Temperature upon Viability of Bacterial Spores Stored for Long Periods in Buffer Substrates. Fred R. Evans and Harold R. Curran 361–368
Use of Shaken Cultures in the Assimilation Test for Yeast Identification. Donald G. Ahearn, Frank J. Roth, Jr., Jack W. Fell, and Samuel P. Meyers 369–371
Studies on Immunity to Toxins of *Clostridium botulinum*. VI. Purification and Detoxification of Type D Toxin and the Immunological Response to Toxoid. Matteo A. Cardella, James T. Duff, Billy H. Wingfield, and Carl Gottfried 372–378
Cytopathic Index: A New Method for the Quantitative Evaluation of Tissue Culture Infectivity of Different Virus Strains. D. Balducci, G. Andreoni, G. B. Gori, L. Castelli, and G. Mancini 379–383
Prevention of Amethopterin Inhibition by 2-Methyladenine. Maude E. Loebeck 384–386
Sensitivities of Different Bacteriophage Species to Ionizing Radiations. G. Bertani 387–393
Permeability of Azotobacter to Succinate and Malate. Roy Repaske, Joan Shroat, and David Allman 394–405
Influence of Ingested Foods on the Oral Toxicity in Mice of Crystalline Botulinal Type A. Toxin. Carl Lamanna and Charles E. Meyers 406–410
Fermentation of Glucose-C^{14} and Xylose-C^{14} by Various Strains of *Leuconostoc mesenteroides*. A. C. Blackwood and E. R. Blakley 411–416
Electron Microscopy of Ultrathin Sections of *Schizosaccharomyces ostosporus*. III. Ascosporogenesis, Ascospore Structure, and Germination. S. F. Conti and H. B. Naylor 417–425
Degradation of Isoprenoid Compounds by Microorganisms. I. Isolation and Characterization of an Isoprenoid-Degrading Bacterium, *Pseudomonas citronellolis* n. sp. Werner Seubert 426–434
Comparative Study of the Agglutinogens of the Endospores of *Bacillus anthracis* and *Bacillus cereus*. Carl Lamanna and Daniel Eisler 435–441
Effect of Mycostatin and Fungizone on the Growth of *Histoplasma capsulatum* in Tissue Culture. Dexter H. Howard 442–449
Production of Toxin *in Vitro* by *Bacillus anthracis* and Its Separation into Two Components. Curtis B. Thorne, Dorothy M. Molnar, and Richard E. Strange 450–455

NOTES:

Staphylococcal Antibody Production in Response to Injections with *Listeria monocytogenes*. H. J. Welshimer 456–457
Differential Counting of Mixed Bacterial Populations. David J. Hentges and MacDonald Fulton 457–458

Spheroidal Forms of *Bacillus megaterium* Induced by Potassium Tellurite. Tomio Kawata, Theodore Sall, and Stuart Mudd 459
Production of Antibacterial Substances by Benthic Tropical Marine Algae. Mary Belle Allen and E. Yale Dawson 459–460

No. 4, April 1960

Measurement of Gram-Positiveness. Walter Borzani 461–463
Protein Synthesis and the Induction of Mutations in *Escherichia coli* by Alkylating Agents. B. Strauss and S. Okubo 464–473
L-Serine Specific Dehydrase from *Clostridium acidi-urici*. Moshe Benziman, Richard D. Sagers, and I. C. Gunsalus 474–479
X-Ray Irradiation of *Coccidioides immitis* Arthrospores: Survival Curves and Avirulent Mutants Isolated. J. M. Foley, R. J. Berman, and C. E. Smith 480–487
An Intracellular Hemolysin of Group A Streptococci. III. Immunological Studies. John H. Schwab 488–495
An Intracellular Hemolysin of Group A Streptococci. IV. Lethal Activity in Mice. Edward A. Sharpless and John H. Schwab 496–501
A Ferrous-Ion-Oxidizing Bacterium. I. Isolation and Some General Physiological Characteristics. Jay V. Beck 502–509
Growth of L-Forms of *Proteus mirabilis* in Liquid Media. Robert A. Altenbern and Otto E. Landman 510–518
Effect of Peptides and Amino Acids in the Serine Nutrition of *Leuconostoc mesenteroides*. Thomas P. O'Barr and David A. Pierce 519–523
Nature of the Citrovorum Factor Requirement of *Pediococcus cerevisiae*. Robert C. Wood and George H. Hitchings 524–526
Enzymatic Basis of Resistance to Aureomycin. III. Inhibition by Aureomycin of Protein-Stimulated Electron Transport in *Escherichia coli*. Arthur K. Saz and L. Marina Martinez 527–531
Comparison of the Mechanism of Glycerol Oxidation in Aerobically and Anaerobically Grown *Streptococcus faecalis*. N. J. Jacobs and P. J. VanDemark 532–538
Studies on the Nutrition and Physiology of *Pasteurella pestis*. V. Inhibition of Growth by D-Serine and Its Reversal by Various Compounds. James L. Smith and Kiyoshi Higuchi 539–543
Metabolism of ω-Amino Acids. I. Fermentation of γ-Aminobutyric Acid by *Clostridium aminobutyricum* n. sp. John K. Hardman and Thressa C. Stadtman 544–548
Metabolism of ω-Amino Acids. II. Fermentation of Δ-Aminovaleric Acid by *Clostridium aminovalericum* n. sp. John K. Hardman and Thressa C. Stadtman 549–552
Cultural Conditions Influencing Nitrate Formation by *Aspergillus flavus*. Edwin L. Schmidt 553–557
Gene Transfer and Elimination in Bacterial Crosses with Strain K-12 of *Escherichia coli*. Roger Weinberg 558–563
Trace Element Requirements of *Bacillus subtilis* for Mycobacillin Formation. S. K. Majumdar and S. K. Bose 564–565
Chemically Defined Medium for the Growth of *Pasteurella tularensis*. S. C. Nagle, Jr., R. E. Anderson, and N. D. Gary 566–571
Moisture Requirements of Bacteria. I. Influence of Temperature and pH on Requirements of *Pseudomonas fluorescens*. R. J. Wodzinski and W. C. Frazier 572–578
Transformation of *Neisseria meningitidis* by Deoxyribonucleates from Cells and from Culture Slime. B. Wesley Catlin 579–590
Effect of Incubation Temperature on Biochemical Tests in the Genera *Pseudomonas* and *Achromobacter*. John A. Alford 591–593
Comparison of Graded and Quantal Virulence Tests for *Bacillus anthracis* Spores. Albert L. Fernelius, Ira A. DeArmon, Jr., Frederick Klein, and Ralph E. Lincoln 594–600
Comparative Catabolism of Carbohydrates in *Pseudomonas* Species. Ivan J. Stern, C. H. Wang, and C. M. Gilmour 601–611

NOTES:

Cellular Structure of Large Spirilla. K. A. Bisset and Phyllis Pease 612
Phage T1-Resistant Mutants of *Escherichia coli*. Roger Weinberg 612–614
Indigenous Marine Bacteriophages. R. Spencer 614
Enumeration of Pleuropneumonia-like Cultures. Robert C. Cleverdon and Harold J. Morowitz 615–616
Antibody Response of Man to Canine Distemper Virus. Stephen Millian, John Maisel, C. Henry Kempe, Stanley Plotkin, Joseph Pagano, and Joel Warren 616–618

No. 5, MAY 1960

Metabolism of Cobalamins by a Soil Microorganism. F. Sanders and Gerald R. Seaman 619–624
Factors Affecting Growth and Spore Formation of *Bacillus stearothermophilus*. Sterling K. Long and O. B. Williams 625–628
Lipids of *Bacillus stearothermophilus*. Sterling K. Long and O. B. Williams 629–637
Growth of Bacterial L Forms and Bacterial Protoplasts. C. Weibull and Hans Beckman 638–649
Induced Release of Dipicolinic Acid from Spores of *Bacillus megaterium*. L. J. Rode and J. W. Foster 650–656
Relationship of Temperature to Inapparent Infection of HeLa Cells with Herpes Simplex Virus. Clayton E. Wheeler and Charles M. Canby 657–660
Origin of Deoxyribonucleic Acid of the Bacterial Endospore. Philip H. Hodson and Jay V. Beck 661–665
Effects of 5-Bromodeoxycytidine in *Escherichia coli* and Bacteriophage. David M. Frisch, Jack Gregory, and Donald W. Visser 666–673
Growth Promoting Effect of Some Biotin Analogues for *Candida albicans*. Bernice Y. Firestone and Stewart A. Koser 674–676
Antigenic Relationships of *Torulopsis glabrata* and Seven Species of the Genus *Candida*. H. F. Hasenclever and William O. Mitchell 677–681
Hydroxyl Ion Dependent Release of Amino Acids from Enterococci. William R. Chesbro and James B. Evans 682–690
Lipid Synthesis in Low Protein Homogenates of Yeast. Effects of Mitochondria and Ethylenediaminetetraacetate. Seymour Greenfield and Harold P. Klein 691–696
Lysis of Frozen and Thawed Cells of *Escherichia coli* by Lysozyme, and Their Conversion in Spheroplasts. A. Kohn 697–706
Studies on the Radiation Inactivation of Microorganisms. VI. X-Ray-Induced Breakdown of Deoxyribonucleic Acid in *Haemophilus influenzae* and in Other Bacteria. Johan H. Stuy 707–715
Morphological Characteristics of Oral Fusobacteria as Revealed by the Electron Microscope. E. G. Hampp, D. B. Scott, and R. W. G. Wyckoff 716–728
Incorporation of C^{14}-Labeled Substrates into Violacein. R. D. DeMoss and N. R. Evans 729–733
Temperature and pH-Dependent Changes of Electrophoretic Mobility of *Pasteurella pestis*. Moshe Aronson and Leah Bichowsky-Slomnicki 734–740
Enzymes for Formation of Citrovorum Factor in Members of the Psittacosis Group of Microorganisms. Julio I. Colón 741–746
Safety Test for Q Fever Vaccine. Sanford Berman, Gerald Cole, Joseph P. Lowenthal, and Raymond B. Gochenour 747–751

NOTES:

Pigmentation Capacity of a Strain of *Saccharomyces cerevisiae* Induced by Cultural Conditions. Anita Panek 752
Quantity Production of *Vibrio fetus* cells. C. R. Manclark and M. J. Pickett 752–753
Egg Yolk Agar for Isolation of Coagulase-Positive Staphylococci. Charles H. Carter 753–754

Screening Method for Microorganisms Accumulating Metabolites and Its Use in the Isolation of *Micrococcus glutamicus*. Shigezo Udaka 754–755
Comparison of Two Heat-Shock Methods and a Phenol Treatment Method for Determining Germination Rates of Spores of *Bacillus anthracis*. Albert L. Fernelius 755–756
Fat Bodies in *Nocardia corallina*. J. B. Clark and Clifton Aldridge 756–757
Improved Method of Phage Assay by a Plaque Count Method on Microscope Slides in Trays. Doris J. Ralston and B. Baer 758–759
Use of Carbon Films for Electron Microscopic Observation of Bacteria. E. A. Grula and F. G. Rowe 760–762

No. 6, JUNE 1960

Fructose Dissimilation by *Lactobacillus brevis*. R. W. Eltz and P. J. Vandemark 763–776
Microsome Distribution during Germination of Bacterial Spores. Carl R. Woese, Robert Langridge, and Harold J. Morowitz 777–782
Dissociation of Spore Germination from Outgrowth by Use of Auxotrophic Mutants of *Bacillus subtilis*. Arnold L. Demain and Joanne F. Newkirk 783–788
Studies on *Escherichia coli* B and L Antigens by Stained Capsular Reaction and on Their Occurrence as Capsules. K. Sahab 789–793
Analysis of the Inhibition of Growth Produced by Canavanine in *Escherichia coli*. James H. Schwartz and Werner K. Maas 794–799
Succinoxidase System of *Pasteurella tularensis*. J. H. Fellman and R. C. Mills 800–806
Purification of Staphylococcal Coagulase. Hans Blobel, David T. Berman, and Joseph Simon 807–815
Induction of Cellulase in Fungi by Cellobiose. Mary Mandels and Elwyn T. Reese 816–826
Uptake of Aminopterin by *Bacillus subtilis*. Martin J. Pine 827–834
Reversal of Aminopterin Inhibition in *Bacillus subtilis* at the Site of Drug Entry. Martin J. Pine 835–840
S-Adenosylmethionine in the Vacuole of *Candida utilis*. G. Svihla and F. Schlenk 841–848
Further Serological Studies of Staphylococcal Enterotoxin. Ezra P. Casman 849–856
Studies on *Sarcina ventriculi*. I. Stock Culture Method. E. Canale-Parola and R. S. Wolfe 857–859
Studies on *Sarcina ventriculi*. II. Nutrition. E. Canale-Parola and R. S. Wolfe 860–862
Chloramphenicol-Resistant Strains of *Salmonella typhosa*. I. Induction of Morphological, Cultural, and Antigenic Changes. Lawrence M. Weiner and Raymond E. Swanson 863–868
Tissue Cell Culture Contamination in Relation to Bacterial Pleuropneumonia-like Organisms-L Form Conversion. Nelda B. Holmgren and William E. Campbell, Jr. 869–874
Endogenous Respiration of *Pseudomonas aeruginosa*. R. A. J. Warren, Audrey F. Ells, and J. J. R. Campbell 875–879
Agrobacterium tumefaciens Conn. I. Release of P^{32} and S^{35} by Labeled Bacteria *in Vitro*. Tom Stonier 880–888
Agrobacterium tumefaciens Conn. II. Production of an Antibiotic Substance. Tom Stonier 889–898
Analysis of the Single Dilution Method of Titration of Psittacosis Virus. Robert M. Dougherty, Richard V. McCloskey, and Robert B. Stewart 899–903

NOTES:

Synthesis of Adenine-B_{12} Coenzyme by *Clostridium sticklandii*: Relationship to One-Carbon Metabolism. Thressa C. Stadtman 904–905
Inhibition of Plasma Clotting Ability in Tetracycline-Resistant Mutants of *Staphylococcus aureus*. Manuel Servin Massieu 905
Growth Stimulation of *Pasteurella pestis* by a Combination of Coconut Water and Albumin Complex. Abe Pital 905–906
